

BIOMASS DRYING SYSTEMS

ABGG technologies Inc. in partnership with Westec America, supplies direct contact rotary drum dryers for biomass. Those dryers are used to dry barks, bark and sludge mix or other applications. **ABGG** specializes in turnkey projects where we use the residual heat normally lost after the combustion to dry the biomass that will be used as fuel. The advantages of this process are:

- Significant increase of the combustion chamber efficiency
- Short pay back time
- Pollution and greenhouse gas reduction
- Fuel costs reduction
- Fossil fuels not required anymore, in most cases
