

## WET SCRUBBERS

At **ABGG**, we supply versatile packed bed scrubbers and reliable systems that serve the widest variety of processes. **ABGG** packed scrubbers are highly recommended for the efficient removal of inorganic gases, odors and fumes, and are particularly appropriate where gas streams have extreme pH.

They are well-suited for use as primary or secondary systems in conjunction with thermal oxidizers, and are also used in a series where there are multiple-contaminant gas streams. Optimum system performance is achieved with systems that combine intimate gas/liquid mixing and low pressure drop.
